

HARDENED TRACK FRAME**521042****HARDENED TRACK FRAME****CHARACTERISTICS**

Structure made with medium-large profiles designed for the manual production control of hydraulic pumps. Sized to guarantee a 13 wagons lung with positioning template, the frame is equipped with a vertical guide with pneumatic drive for testing. The ring track is made with hardened guide. The bearings of the wagons are mounted on plates with slewing rings to allow correct movement along the curved sections. The wagons, in aluminum with positioning blocks along the entire ring, have a tilting side plate to compensate for any off-square and do not require adjustments.
